

Chapter 18 – Installing Sliding Doors

<p>Door Opening and Preparation</p>	<ol style="list-style-type: none"> 1. Before removing packaging, check doors and frame for damage. If damaged, notify or Site Leader (SL) or Construction Supervisor (CS) 2. Check to see if doors have been predrilled for door pulls. If they have, pairs will have holes at opposite edges 3. Select pairs of doors that match in visual appearance (grain pattern, color) & correct door pull locations, etc. 4. Put two doors together and check for bow. Plan to install with concave faces together)(and best side toward the room. 5. Confirm: Door Ht. is 80"; rough opening Ht. at both ends is ~ 83"; header is level within 1/8". If not, see SL or CS. 6. Check Jack stud for plumb and gaps. If out of plumb by 1/8" or if any gap exceeds 1/2", notify SL or CS. 7. Install track 2" back from room side wall surface and attach with three 2 1/2" wafer-head screws – middle & both ends. Orient track with roller grooves toward the rear of the closet.
<p>Install Door Hardware</p>	<ol style="list-style-type: none"> 8. Decide which door will be placed in front and rear position in the track. Typically, the front door edge should not be visible when entering the room. 9. Place doors on horses, room side up. Protect with padding. Install door pulls. Use a piece of wood to protect the pulls and hammer into holes. If pull holes are not present, use a 3/4" Forstner bit and drill 3/6" up from the bottom and 1 1/2" in from the wall edge. 10. Turn doors over and install hangers by hand tightening a screw in the single hole and the top of the long slot in each hanger. Hangers with the shallow offset are for the front door; deep offset are for the rear. Install 2" from the door edges. 11. Hang the doors. Move door bottom out a bit outside the closet and tilt top of door inward into the closet. Install rear door first by engaging rollers in the groove at the back of the track, then the front door in the groove at the inside front of the track. 12. Close the doors. At the middle of each door, measure the gap from the bottom of the door to the floor. Gap for future carpeted areas should be 1" – 1 3/8"; for finished (installed) floors the gap should be 3/8" – 5/8" (add 1/4" if finished floor has not yet been installed). Make sure doors are in correct position (door pulls are next to the walls) and loosen the screws slightly to adjust doors so the door edges make uniform contact with the walls and the door-floor gap is within above specifications. Note: If floor trim has already been installed, install top and bottom bumpers (see step 25) and adjust door hangers so wall/trim contact is made with both. 13. If doors have been adjusted to their highest position and floor-door bottom gap is <u>less than the lower limit</u>, the door may have to be cut off. If so, see the SL or CS for direction. If doors have been adjusted to their lowest position and the gap is greater than upper limit, remove the doors and track and install a shim above the track of proper thickness to bring the gap within limits. Note: If cutting a shim for doors over a finished (installed) floor, target shim thickness to provide a gap of 3/8" in favor of the range of 3/8" – 5/8". 14. Verify the door edge-to-wall contact is uniform top-to-bottom, the door-to-floor gap at the middle of the closed doors is within specification and add the third screw to each hanger at the BOTTOM of the short slot a.
<p>Install Door Track and Hang Doors</p> <p>Finish Doorway Installation</p>	<ol style="list-style-type: none"> 15. Finish screwing the track to the header using a 2 1/2" wafer-head screw in every other hole. 16. Cut a 3/4" x 1 1/4" pine strip. With the 3/4" face against the track, nail the strip to the header using 2 1/2" collated finish nails. 17. For doors over future carpeted areas, spacer blocks have to be installed to support the sliding door guide. Obtain a door guide from the Finish Door Kit (don't use the door guide supplied with the door for carpeted areas). Measure the door opening and make a pencil line on the floor at the midpoint. Keep doors closed and slide two layers of 5" x 6" x 1/4" spacers under the doors. Verify the gap between the bottom of the doors and the top of the spacer at the middle of each door is between 3/4" and 7/8". If adjustment is needed, use the appropriate mix of 1/4" and 1/8" spacers. Note: If 5" x 6" spacers are not available, use sets of 3" x 5" spacers and tape together with painter's tape. For doors over finished flooring, skip to steps 20- 23. 18. Move both door panels tight to the Jack stud side of the closet. Center the spacers on the midpoint mark, oriented so the 5" dimension is parallel to the doors. 19. Adjust the sliding door guide to fit the thickness of the doors and slide it under the door edges and center it on the spacer blocks. Keeping the spacer blocks centered on the midpoint and the guide centered on the spacer blocks, move the spacers blocks and the doors until the reveal between the door and the corner of the wall is uniform from top to bottom. Nail the spacers to the floor with a 1 1/4" collated finish nail in each corner. If 3" x 5" spacers are used, nail four nails in each 3" x 5" piece. Remove door guide and put it on the windowsill with screws provided with the door hardware. 20. Finished floors have door guides installed directly to the flooring. Close both doors and verify that the door-to-floor gap at the middle of each door is 3/8" – 5/8", and both doors have uniform contact with the wall (or both top and bottom door bumpers touch the wall/trim if floor trim has already been installed.) 21. Locate the door guide supplied with the doors (Do NOT use a door guide from the Finish Door Kit).

|--|--|
| | <ol style="list-style-type: none">22. Move both door panels tight to the Jack stud. Adjust the sliding door guide to fit the door thickness and slide the door guide under the opposite door edges. Align the left side of the guide flush with the door edges. Move the guide and doors until the reveal between the front door panel and the wall corner is uniform from top-to-bottom.23. Drill two 1/8" diameter pilot holes through the door guide mounting holes into the flooring and fasten the guide to the floor with two of the screws provided with the door hardware.24. Measure the width of the opening at the track and cut a piece of floor trim to that length. With the square edge tight to the plaster, nail with 1 1/4" collated finish nails. Keep nails 3" away from the edges to avoid splitting. Fill nail holes with putty.25. Install bumper pads (located in the Finish Door Kit. Attach 1" DIA.x 3/8" felt pads at the top of the vertical edges of each door and 1" DIA x 1/8" vinyl pads at the bottom edges of each door. |

Quality Points

Chapter 18 – Installing Sliding Doors

- Two doors match in visual appearance
- Over finished flooring (hard flooring) gap between bottom of doors and the floor is between 3/8" – 5/8"
- Over future carpeting, gap between bottom of doors and 5" x 6" x 1/4" spacers is between 3/4" – 7/8". Spacers have been nailed to the floor with 1 1/4" collated finish nails. Door guide from Finish Door Kit has been left on the windowsill along with mounting screws
- Doors installed over finished flooring slide easily in door guides
- Door edges contact the walls uniformly from top to bottom (or bumper contact is made to wall/trim if bumpers installed)
- Door(s) against Jack stud(s) show uniform reveal from top to bottom
- Floor trim piece has been installed with the square edge tight to the plaster and ends snug to the side walls, using 1 1/4" collated finish nails. Holes have been puttied.
- Doors slide easily and smoothly after nailing trim piece
- Door pulls have been installed at correct height and distance from the door edges.
- Front door edge is not visible when entering the room.
- Track has been secured with 2 1/2" wafer-head screws in every other mounting hole
